Dear Hiring Manager,

Hope you are doing well!

With a diverse background in computer science and a robust set of technical skills, I would like to express my interest in joining your organization. I am a highly passionate learner who loves to explore and deep dive into things that amazes/intrigues me the most. I thrive on maintaining focus and delving into deeper complexities; however, in the rapid pace of our world, such opportunities can be scarce.

My educational journey at Arizona State University, where I am currently pursuing a Master of Computer Science, has equipped me with a strong foundation in Computer Science. I have a GPA of 4.0/4.0. I bring a diverse and robust skill set encompassing programming languages such as Python, C++, Java, C, C#, JavaScript, TypeScript, PHP, and SQL. Proficient in operating systems like Windows, MacOS, and Linux/Unix, I also have hands-on experience with databases including PostgreSQL and MySQL. My expertise extends to web technologies HTML, CSS, Bootstrap, Angular, React.js, Node.js, RabbitMQ, jQuery, ASP.NET, Redux, REST APIs, GraphQL OOP, Testing Frameworks (Mocha, Chai and Sinon) and DevOps tools (Docker, Git, Jenkins, Kubernetes, Terraform, Postman). I excel in agile methodologies, understand the SDLC, implement MVC architecture, and ensure effective CI/CD.

Throughout my career, I have dealt with various programming languages and diverse technical stacks. I really enjoy exploring mathematics, solving programming challenges & spending time with nature. During my free time, I explore generative art and engage in cooking.

I firmly believe in these.

- Mathematics must the language of universe and God must be the ultimate mathematician.
- Any Programming Language is just a tool to solve a specific problem.
- Nature is the ultimate True Random Number Generator.
- Teams can never be managed but lead.
- Even if were to pay enough attention to a single leaf or a grain of sand, it would leave us amazed for the rest of our lives.

A detailed description of my technical skills and career progress is available in my resume.

I'm looking forward to hearing from you and quite excited to be a part of your team!

Thanks & Regards

Sreeja Atluri.
